

Principles of Econometrics, 3rd Edition

R. Carter Hill, William E. Griffiths, Guay C. Lim

Table of Contents

Preface

Chapter 1 An Introduction to Econometrics

- 1.1 Why Study Econometrics?
- 1.2 What is Econometrics About?
 - 1.2.1 Some Examples
- 1.3 The Econometric Model
- 1.4 How Do We Obtain Data?
 - 1.4.1 Experimental Data
 - 1.4.2 Nonexperimental Data
- 1.5 Statistical Inference
- 1.6 A Research Format

Chapter 2 The Simple Linear Regression Model

- Learning Objectives and Keywords
- 2.1 An Economic Model
- 2.2 An Econometric Model
 - 2.2.1 Introducing the Error Term
- 2.3 Estimating the Regression Parameters
 - 2.3.1 The Least Squares Principle
 - 2.3.2 Estimates for the Food Expenditure Function
 - 2.3.3 Interpreting the Estimates
 - 2.3.3a Elasticities
 - 2.3.3b Prediction
 - 2.3.3c Computer Output
 - 2.3.4 Other Economic Models
- 2.4 Assessing the Least Squares Estimators
 - 2.4.1 The Estimator b_2
 - 2.4.2 The Expected Values of b_1 and b_2
 - 2.4.3 Repeated Sampling
 - 2.4.4 The Variances and Covariance of b_1 and b_2
- 2.5 The Gauss-Markov Theorem
- 2.6 The Probability Distributions of the Least Squares Estimators
- 2.7 Estimating the Variance of the Error Term
 - 2.7.1 Estimating the Variances and Covariances of the Least Squares Estimators
 - 2.7.2 Calculations for the Food Expenditure Data
- 2.8 Exercises
 - 2.8.1 Problems
 - 2.8.2 Computer Exercises
- Appendix 2A Derivation of the Least Squares Estimates
- Appendix 2B Deviation from the Mean Form of b_2
- Appendix 2C b_2 is a Linear Estimator
- Appendix 2D Derivation of Theoretical Expression for b_2

Appendix 2E Deriving the Variance of b_2
Appendix 2F Proof of the Gauss-Markov Theorem

Chapter 3 Interval Estimation and Hypothesis Testing

Learning Objectives and Keywords

3.1 Interval Estimation

- 3.1.1 The t -distribution
- 3.1.2 Obtaining Interval Estimates
- 3.1.3 An Illustration
- 3.1.4 The Repeated Sampling Context

3.2 Hypothesis Tests

- 3.2.1 The Null Hypothesis
- 3.2.2 The Alternative Hypothesis
- 3.2.3 The Test Statistic
- 3.2.4 The Rejection Region
- 3.2.5 A Conclusion

3.3 Rejection Regions for Specific Alternatives

- 3.3.1 One-tail Tests with Alternative "Greater Than" ($>$)
- 3.3.2 One-tail Tests with Alternative "Less Than" ($<$)
- 3.3.3 Two-tail Tests with Alternative "Not Equal To" (\neq)

3.4 Examples of Hypothesis Tests

- 3.4.1 Right-tail Tests
 - 3.4.1a One-Tail Test of Significance
 - 3.4.1b One-Tail Test of an Economic Hypothesis
- 3.4.2 Left-Tail Tests
- 3.4.3 Two-Tail Tests
 - 3.4.3a Two-Tail Test of an Economic Hypothesis
 - 3.4.3b Two-Tail Test of Significance

3.5 The p -value

- 3.5.1 p -value for a Right-Tail Test
- 3.5.2 p -value for a Left-Tail Test
- 3.5.3 p -value for a Two-Tail Test
- 3.5.3 p -value for a Two-Tail Test of Significance

3.6 Exercises

- 3.6.1 Problems
- 3.6.2 Computer Exercises

Appendix 3A Derivation of the t -Distribution

Appendix 3B Distribution of the t -Statistic Under H_1

Chapter 4 Prediction, Goodness of Fit, and Modeling Issues

Learning Objectives and Keywords

4.1 Least Squares Prediction

- 4.1.1 Prediction in the Food Expenditure Model

4.2 Measuring Goodness of Fit

- 4.2.1 Correlation Analysis
- 4.2.2 Correlation Analysis and R^2
- 4.2.3 The Food Expenditure Example
- 4.2.4 Reporting the Results

4.3 Modeling Issues

- 4.3.1 The Effects of Scaling the Data
- 4.3.2 Choosing a Functional Form
- 4.3.3 The Food Expenditure Model
- 4.3.4 Are the Regression Errors Normally Distributed?

- 4.3.5 Another Empirical Example
- 4.4 Log-Linear Models
 - 4.4.1 A Growth Model
 - 4.4.2 A Wage Equation
 - 4.4.3 Prediction in the Log-Linear Model
 - 4.4.4 A Generalized R^2 Measure
 - 4.4.5 Prediction Intervals in the Log-Linear Model
- 4.5 Exercises
 - 4.5.1 Problems
 - 4.5.2 Computer Exercises
- Appendix 4A Development of a Prediction Interval
- Appendix 4B The Sum of Squares Decomposition
- Appendix 4C The Log-Normal Distribution

Chapter 5 The Multiple Regression Model

- Learning Objectives and Keywords
- 5.1 Model Specification and the Data
 - 5.1.1 The Economic Model
 - 5.1.2 The Econometric Model
 - 5.1.2a The General Model
 - 5.1.2b The Assumptions of the Model
- 5.2 Estimating the Parameters of the Multiple Regression Model
 - 5.2.1 Least Squares Estimation Procedure
 - 5.2.2 Least Squares Estimates Using Hamburger Chain Data
 - 5.2.3 Estimation of the Error Variance σ^2
- 5.3 Sampling Properties of the Least Squares Estimator
 - 5.3.1 The Variances and Covariances of the Least Squares Estimators
 - 5.3.2 The Properties of the Least Squares Estimators Assuming Normally Distributed Errors
- 5.4 Interval Estimation
- 5.5 Hypothesis Testing for a Single Coefficient
 - 5.5.1 Testing the Significance of a Single Coefficient
 - 5.5.2 One-Tail Hypothesis Testing for a Single Coefficient
 - 5.5.2a Testing For Elastic Demand
 - 5.5.2b Testing Advertising Effectiveness
- 5.6 Measuring Goodness of Fit
 - 5.6.1 Reporting the Regression Results
- Keywords
- 5.7 Exercises
 - 5.7.1 Problems
 - 5.7.2 Computer Exercises
- Appendix 5A Derivation of Least Squares Estimators

Chapter 6 Further Inference in the Multiple Regression Model

- Learning Objectives and Keywords
- 6.1 The F – Test
 - 6.2.1 The Relationship Between t - and F -Tests
- 6.2. Testing the Significance of a Model
- 6.3 An Extended Model
- 6.4 Testing Some Economic Hypotheses
 - 6.4.1 The Significance of Advertising
 - 6.4.2 The Optimal Level of Advertising
 - 6.4.2a One-Tail Test with More than One Parameter
 - 6.4.3 Using Computer Software
- 6.5 The Use of Nonsample Information

- 6.6 Model Specification
 - 6.6.1 Omitted Variables
 - 6.6.2 Irrelevant Variables
 - 6.6.3 Choosing the Model
 - 6.6.3a The RESET Test
- 6.7 Poor Data, Collinearity, and Insignificance
 - 6.7.1 The Consequences of Collinearity
 - 6.7.2 An Example
 - 6.7.3 Identifying and Mitigating Collinearity
- 6.8 Prediction
- 6.9 Exercises
 - 6.9.1 Problems
 - 6.9.2 Computer Exercises
- Appendix 6A Chi-Square and F -Tests: More Details
- Appendix 6B Omitted-Variable Bias: A Proof

Chapter 7 Nonlinear Relationships

- Learning Objectives and Keywords
- 7.1 Polynomials
 - 7.1.1 Cost and Product Curves
 - 7.1.2 A Wage Equation
- 7.2 Dummy Variables
 - 7.2.1 Intercept Dummy Variables
 - 7.2.1a Choosing the Reference Group
 - 7.2.2 Slope Dummy Variables
 - 7.2.3 An Example: The University Effect on House Prices
- 7.3 Applying Dummy Variables
 - 7.3.1 Interactions Among Qualitative Factors
 - 7.3.2 Qualitative Factors with Several Categories
 - 7.3.3 Testing the Equivalence of Two Regressions
 - 7.3.4 Controlling for Time
 - 7.3.4a Seasonal Dummies
 - 7.3.4b Annual Dummies
 - 7.3.4c Regime Effects
- 7.4 Interactions Between Two Continuous Variables
- 7.5 Log-Linear Models
 - 7.5.1 Dummy Variables
 - 7.5.1a A Rough Calculation
 - 7.5.1b An Exact Calculation
 - 7.5.2 Interaction and Quadratic Terms
- 7.6 Exercises
 - 7.6.1 Problems
 - 7.6.2 Computer Exercises
- Appendix 7A Details of Log-Linear Model Interpretation

Chapter 8 Heteroskedasticity

- Learning Objectives
- 8.1 The Nature of Heteroskedasticity
- 8.2 Using the Least Squares Estimator
- 8.3 The Generalized Least Squares Estimator
 - 8.3.1 Transforming The Model
 - 8.3.2 Estimating the Variance Function
 - 8.3.3 A Heteroskedastic Partition
- 8.4 Detecting Heteroskedasticity
 - 8.4.1 Residual Plots

- 8.4.2 The Goldfeld-Quandt Test
- 8.4.3 Testing the Variance Function
 - 8.4.3a The White Test
 - 8.4.3b Testing the Food Expenditure Example
- 8.5 Exercises
 - 8.5.1 Problems
 - 8.5.2 Computer Exercises
- Appendix 8A Properties of the Least Squares Estimator
- Appendix 8B Variance Function Tests for Heteroskedasticity

Chapter 9 Dynamic Models, Autocorrelation and Forecasting

- Learning Objectives and Keywords
- 9.1 Introduction
- 9.2 Lags in the Error Term: Autocorrelation
 - 9.2.1 Area Response Model for Sugar Cane
 - 9.2.2 First Order Autoregressive Errors
- 9.3 Estimating an AR(1) Error Model
 - 9.3.1 Least Squares Estimation
 - 9.3.2 Nonlinear Least Squares Estimation
 - 9.3.2a Generalized Least Squares Estimation
 - 9.3.3 Estimating a More General Model
- 9.4 Testing for Autocorrelation
 - 9.4.1 Residual Correlogram
 - 9.4.2 A Lagrange Multiplier Test
 - 9.4.3 Recapping and Looking Forward
- 9.5 An Introduction to Forecasting: Autoregressive Models
- 9.6 Finite Distributed Lags
- 9.7 Autoregressive Distributed Lag Models
- 9.8 Exercises
 - 9.8.1 Problems
 - 9.8.2 Computer Exercises
- Appendix 9A Generalized Least Squares Estimation
- Appendix 9B The Durbin Watson Test
 - 9B.1 The Durbin-Watson Bounds Test
- Appendix 9C Deriving ARDL Lag Weights
 - 9C.1 The Geometric Lag
 - 9C.2 Lag Weights for More General ARDL Models
- Appendix 9D Forecasting: Exponential Smoothing

Chapter 10 Random Regressors and Moment Based Estimation

- Learning Objectives and Keywords
- 10.1 Linear Regression with Random x 's
 - 10.1.1 The Small Sample Properties of the Least Squares Estimator
 - 10.1.2 Asymptotic Properties of the Least Squares Estimator: x Not Random
 - 10.1.3 Asymptotic Properties of the Least Squares Estimator: x Random
 - 10.1.4 Why Least Squares Fails
- 10.2 Cases in Which x and e are Correlated
 - 10.2.1 Measurement Error
 - 10.2.2 Omitted Variables
 - 10.2.3 Simultaneous Equations Bias
 - 10.2.4 Lagged Dependent Variable Models with Serial Correlation
- 10.3 Estimators Based on the Method of Moments
 - 10.3.1 Method of Moments Estimation of a Population Mean and Variance
 - 10.3.2 Method of Moments Estimation in the Simple Linear Regression Model

- 10.3.3 Instrumental Variables Estimation in the Simple Linear Regression Model
 - 10.3.3a The Importance of Using Strong Instruments
 - 10.3.3b An Illustration Using Simulated Data
 - 10.3.3c An Illustration Using a Wage Equation
- 10.3.4 Instrumental Variables Estimation with Surplus Instruments
 - 10.3.4a An Illustration Using Simulated Data
 - 10.3.4b An Illustration Using a Wage Equation
- 10.3.5 Instrumental Variables Estimation in a General Model
 - 10.3.5a Hypothesis Testing with Instrumental Variables Estimates
 - 10.3.5b Goodness of Fit with Instrumental Variables Estimates
- 10.4 Specification Tests
 - 10.4.1 The Hausman Test for Endogeneity
 - 10.4.2 Testing for Weak Instruments
 - 10.4.3 Testing Instrument Validity
 - 10.4.4 Numerical Examples Using Simulated Data
 - 10.4.4a The Hausman Test
 - 10.4.4b Test for Weak Instruments
 - 10.4.4c Testing Surplus Moment Conditions
 - 10.4.5 Specification Tests for the Wage Equation
- 10.5 Exercises
 - 10.5.1 Problems
 - 10.5.2 Computer Exercises
- Appendix 10A Conditional and Iterated Expectations
 - 10A.1 Conditional Expectations
 - 10A.2 Iterated Expectations
 - 10A.3 Regression Model Applications
- Appendix 10B The Inconsistency of Least Squares
- Appendix 10C The Consistency of the Instrumental Variables Estimator
- Appendix 10D The Logic of the Hausman Test

Chapter 11 Simultaneous Equations Models

- Learning Objectives and Keywords
- 11.1 A Supply and Demand Model
- 11.2 The Reduced Form Equations
- 11.3 The Failure of Least Squares
- 11.4 The Identification Problem
- 11.5 Two-Stage Least Squares Estimation
 - 11.5.1 The General Two-Stage Least Squares Estimation Procedure
 - 11.5.2 The Properties of the Two-Stage Least Squares Estimator
- 11.6 An Example of Two-Stage Least Squares Estimation
 - 11.6.1 Identification
 - 11.6.2 The Reduced Form Equations
 - 11.6.3 The Structural Equations
- 11.7 Supply and Demand at the Fulton Fish Market
 - 11.7.1 Identification
 - 11.7.2 The Reduced Form Equations
 - 11.7.3 Two Stage Least Squares Estimation of Fish Demand
- 11.8 Exercises
 - 11.8.1 Problems
 - 11.8.2 Computer Exercises
- Appendix 11A An Algebraic Explanation of the Failure of Least Squares

Chapter 12 Analyzing Time Series Data and Cointegration

- Learning Objectives and Keywords
- 12.1 Stationary and Nonstationary Variables

- 12.1.1 The First-Order Autoregressive Model
- 12.1.2 Random Walk Models
- 12.2 Spurious Regressions
- 12.3 Unit Root Tests for Stationarity
 - 12.3.1 Dickey-Fuller Test 1 (no constant and no trend)
 - 12.3.2 Dickey-Fuller Test 2 (with constant but no trend)
 - 12.3.3 Dickey-Fuller Test 3 (with constant and with trend)
 - 12.3.4. The Dickey-Fuller Testing Procedure
 - 12.3.5 The Dickey-Fuller Tests: An Example
 - 12.3.6 Order of Integration
- 12.4 Cointegration
 - 12.4.1 An Example of a Cointegration Test
- 12.5 Regression When There is No Cointegration
 - 12.5.1 First Difference Stationary
 - 12.5.2 Trend Stationary
- 12.6 Exercises
 - 12.6.1 Problems
 - 12.6.2 Computer Exercises

Chapter 13 Vector Error Correction and Vector Autoregressive Models: An Introduction to Macroeconometrics

- Learning Objectives and Keywords
- 13.1 VEC and VAR Models
- 13.2 Estimating a Vector Error Correction Model
 - 13.2.1 An Example
- 13.3 Estimating a VAR Model
- 13.4 Impulse Responses and Variance Decompositions
 - 13.4.1 Impulse Response Functions
 - 13.4.1a The Univariate Case
 - 13.4.2b The Bivariate Case
 - 13.4.2 Forecast Error Variance Decompositions
 - 13.4.2a Univariate Analysis
 - 13.4.2b Bivariate Analysis
 - 13.4.2c The General Case
- 13.5 Exercises
 - 13.5.1 Problems
 - 13.5.2 Computer Exercises
- Appendix 13A The Identification Problem

Chapter 14 Time-Varying Volatility and ARCH Models: An Introduction to Financial Econometrics

- Learning Objectives and Keywords
- 14.1 The ARCH Model
 - 14.1.1 Conditional and Unconditional Forecasts
- 14.2 Time-Varying Volatility
- 14.3 Testing, Estimating and Forecasting
 - 14.3.1 Testing for ARCH Effects
 - 14.3.2 Estimating ARCH Models
 - 14.3.3 Forecasting Volatility
- 14.4 Extensions
 - 14.4.1 The GARCH Model—Generalized ARCH
 - 14.4.2 Allowing for an Asymmetric Effect
 - 14.4.3 GARCH-in-Mean and Time-Varying Risk Premium
- 14.5 Exercises
 - 14.5.1 Problems

14.5.2 Computer Exercises

Chapter 15 Panel Data Models

Learning Objectives and Keywords

- 15.1 Grunfeld's Investment Data
 - 15.2 Sets of Regression Equations
 - 15.3 Seemingly Unrelated Regressions
 - 15.3.1 Separate or Joint Estimation?
 - 15.3.2 Testing Cross-Equation Hypotheses
 - 15.4 The Fixed Effects Model
 - 15.4.1 A Dummy Variable Model
 - 15.4.2 The Fixed Effects Estimator
 - 15.4.3 Fixed Effects Estimation Using a Microeconomic Panel
 - 15.5 The Random Effects Model
 - 15.5.1 Error Term Assumptions
 - 15.5.2 Testing for Random Effects
 - 15.5.3 Estimation of the Random Effects Model
 - 15.5.4 An Example Using the NLS Data
 - 15.5.5 Comparing Fixed and Random Effects Estimators
 - 15.5.5a Endogeneity in the Random Effects Model
 - 15.5.5b The Fixed Effects Estimator in a Random Effects Model
 - 15.5.5c A Hausman Test
 - 15.6 Exercises
 - 15.6.1 Problems
 - 15.6.2 Computer Exercises
- Appendix 15A Estimation of Error Components

Chapter 16 Qualitative and Limited Dependent Variable Models

Learning Objectives and Keywords

- 16.1 Models with Binary Dependent Variables
 - 16.1.1 The Linear Probability Model
 - 16.1.2 The Probit Model
 - 16.1.3 Interpretation of the Probit Model
 - 16.1.4 Maximum Likelihood Estimation of the Probit Model
 - 16.1.5 An Example
- 16.2 The Logit Model for Binary Choice
- 16.3 Multinomial Logit
 - 16.3.1 Multinomial Logit Choice Probabilities
 - 16.3.2 Maximum Likelihood Estimation
 - 16.3.3 Post-Estimation Analysis
 - 16.3.4 An Example
- 16.4 Conditional Logit
 - 16.4.1 Conditional Logit Choice Probabilities
 - 16.4.2 Post-Estimation Analysis
 - 16.4.3 An Example
- 16.5 Ordered Choice Models
 - 16.5.1 Ordinal Probit Choice Probabilities
 - 16.5.2 Estimation and Interpretation
 - 16.5.3 An Example
- 16.6 Models for Count Data
 - 16.6.1 Maximum Likelihood Estimation
 - 16.6.2 Interpretation in the Poisson Regression Model
 - 16.6.3 An Example

- 16.7 Limited Dependent Variables
 - 16.7.1 Censored Data
 - 16.7.2 A Monte Carlo Experiment
 - 16.7.3 Maximum Likelihood Estimation
 - 16.7.4 Tobit Model Interpretation
 - 16.7.5 An Example
 - 16.7.6 Sample Selection
 - 16.7.6a The Econometric Model
 - 16.7.6b Heckit Example: Wages of Married Women
- 16.8 Exercises

Chapter 17 Writing an Empirical Research Report, and Sources of Economic Data

- 17.1 Selecting a Topic for an Economics Project
 - 17.1.1 Choosing a Topic
 - 17.1.2 Writing an Abstract
- 17.2 A Format for Writing a Research Report
- 17.3 Sources of Economic Data
 - 17.3.1 Links to Economic Data on the Internet
 - 17.3.2 Traditional Sources of Economic Data
 - 17.3.3 Interpreting Economic Data
- 17.4 Exercises

Appendix A Review of Math Essentials

- Learning Objectives and Keywords
- A.1 Summation
- A.2 Some Basics
 - A.2.1 Numbers
 - A.2.2 Exponents
 - A.2.3 Scientific Notation
 - A.2.4 Logarithms and the Number e
- A.3 Linear Relationships
 - A.3.1 Elasticity
- A.4 Nonlinear Relationships
 - A.4.1 Quadratic Function
 - A.4.2 Cubic Function
 - A.4.3 Reciprocal Function
 - A.4.4 Log-Log Function
 - A.4.5 Log-Linear Function
 - A.4.6 Approximating Logarithms
 - A.4.7 Approximating Logarithms in the Log-Linear Model
 - A.4.8 Linear-Log Function
- A.5 Exercises

Appendix B Review of Probability Concepts

- Learning Objectives and Keywords
- B.1 Random Variables
- B.2 Probability Distributions
- B.3 Joint, Marginal and Conditional Probability Distributions
 - B.3.1 Marginal Distributions
 - B.3.2 Conditional Probability
 - B.3.3 A Simple Experiment
- B.4 Properties of Probability Distributions

- B.4.1 Mean, Median and Mode
- B.4.2 Expected Values of Functions of a Random Variable
- B.4.3 Expected Values of Several Random Variables
- B.4.4 The Simple Experiment Again
- B.5 Some Important Probability Distributions
 - B.5.1 The Normal Distribution
 - B.5.2 The Chi-square Distribution
 - B.5.3 The t -distribution
 - B.5.4 The F -distribution
- B.6 Exercises

Appendix C Review of Statistical Inference

Learning Objectives and Keywords

- C.1 A Sample of Data
- C.2 An Econometric Model
- C.3 Estimating the Mean of a Population
 - C.3.1 The Expected Value of \bar{Y}
 - C.3.2 The Variance of \bar{Y}
 - C.3.3 The Sampling Distribution of \bar{Y}
 - C.3.4 The Central Limit Theorem
 - C.3.5 Best Linear Unbiased Estimation
- C.4 Estimating the Population Variance and Other Moments
 - C.4.1 Estimating the Population Variance
 - C.4.2 Estimating Higher Moments
 - C.4.3 The Hip Data
 - C.4.4 Using the Estimates
- C.5 Interval Estimation
 - C.5.1 Interval Estimation: σ^2 Known
 - C.5.2 A Simulation
 - C.5.3 Interval Estimation: σ^2 Unknown
 - C.5.4 A Simulation (continued)
 - C.5.5 Interval Estimation Using the Hip Data
- C.6 Hypothesis Tests About a Population Mean
 - C.6.1 Components of Hypothesis Tests
 - C.6.2 One-Tail Tests with Alternative “Greater Than” ($>$)
 - C.6.3 One-Tail Tests with Alternative “Less Than” ($<$)
 - C.6.4 Two-Tail Tests with Alternative “Not Equal To” (\neq)
 - C.6.5 Example of a One-Tail Test Using the Hip Data
 - C.6.6 Example of a Two-Tail Test Using Hip Data
 - C.6.7 The p -value
 - C.6.8 A Comment on Stating Null and Alternative Hypotheses
 - C.6.9 Type I and Type II Errors
 - C.6.10 A Relationship Between Hypothesis Testing and Confidence Intervals
- C.7 Some Other Useful Tests
 - C.7.1 Testing the Population Variance
 - C.7.2 Testing the Equality of Two Population Means
 - C.7.3 Testing the Ratio of Two Population Variances
 - C.7.4 Testing the Normality of a Population
- C.8 Introduction to Maximum Likelihood Estimation (Contains some advanced material)
 - C.8.1 Inference with Maximum Likelihood Estimators
 - C.8.2 The Variance of the Maximum Likelihood Estimator
 - C.8.3 The Distribution of the Sample Proportion
 - C.8.4 Asymptotic Test Procedures
 - C.8.4a The Likelihood Ratio (LR) Test
 - C.8.4b The Wald Test
 - C.8.4c The Lagrange Multiplier (LM) Test

- C.9 Algebraic Supplements (Optional)
 - C.9.1 Derivation of Least Squares Estimator
 - C.9.2 Best Linear Unbiased Estimation
- C.10 Exercises

Appendix D Solutions to Selected Exercises

Appendix E Tables

- Table 1 Cumulative Probabilities for the Standard Normal Distribution
- Table 2 Percentiles for the t -Distribution
- Table 3 Percentiles for the Chi-Square Distribution
- Table 4 95th Percentile for the F -Distribution
- Table 5 99th Percentile for the F -Distribution
